

HW 7 - Shiny

This activity gives you practice implementing some parts of creating a shiny app.

Our goal will be able to create the app you see here: https://shiny.stat.ncsu.edu/jbpost2/Shiny_HW/. This app requires the `shinyalert` package so please make sure you download that.

There is a starter `app.R` file, a `helpers.R` file, and a `my_sample_temp.rds` file to get you started. Start by creating a new folder to place these files in (likely in an R project and/or github repo but I'll leave that up to you). Then open the `app.R` file and read through it. You should be able to run the `app.R` file as is but, of course, not all functionality is there. Compare it to the app running on the website and try to update as you can.

Get the app fully functional (don't worry about the shinyalert message that sometimes shows when selecting variables that don't make sense together - just work through the parts noted in the `app.R` file).

Once you have it updated, upload your `app.R` file on the Moodle assignment link!
